Description

### Context

Motivated by Gregory Smith's web scrape of VGChartz [Video Games Sales](#), this data set simply extends the number of variables with another web scrape from [Metacritic](#). Unfortunately, there are missing observations as Metacritic only covers a subset of the platforms. Also, a game may not have all the observations of the additional variables discussed below. Complete cases are ~ 6,900

### Content

Alongside the fields: Name Platform Year of Release Genre Publisher NA Sales EU Sales JP Sales Other Sales Global Sales we

# The Dataset

## Problems

- Duplicate video game names
- Games that were not released yet
- Did not have both Critic Score and User Score

## Solutions

- Group dataset by video game names
- Video games before 2016
- Only games with both Critic and User scores

A Name Name of the game

A Platform Console on which the game is running

# Year\_of\_Release Year of the game released

A Genre Game's category

A Publisher Publisher

# NA\_Sales Game sales in North America (in millions of units)

# EU\_Sales Game sales in the European Union (in millions of units)

# JP\_Sales Game sales in Japan (in millions of units)

# Other\_Sales Game sales in the rest of the world, i.e. Africa, Asia excluding Japan, Australia, Europe excluding the E.U. and South America (in millions of units)

# Global\_Sales Total sales in the world (in millions of units)

# Critic\_Score Aggregate score compiled by Metacritic staff

# Critic\_Count The number of critics used in coming up with the Critic\_score

# User\_Score Score by Metacritic's subscribers

# User\_Count Number of users who gave the user\_score

A Developer Party responsible for creating the game

A Rating The ESRB ratings (E.g. Everyone, Teen, Adults Only..etc)

# The Dataset

## Columns for analysis

- Name
- Year of Release
- Genre
- Publisher
- Global Sales
- Critic Score
- User Score

~~A~~ Name Name of the game

~~A~~ ~~Platform~~ Console on which the game is running

# Critic Score vs User Score

Are they different?

<https://www.hawkinspersonnel.com/cheerful-business-people-showing-thumbs-up-isolated-on-white/>

<https://striveliving.ca/adults-services/strive-centre/group-of-people-showing-thumbs-up/>

# Critic Score vs User Score

- Mean of Critic Score: 70.45
- Mean of User Score: 74.34
- Difference of means: 3.88
- Bootstrap resampled a simulated dataset where mean of Critic score = mean of User score
- Sampling distribution of difference of simulated means
- P-value = 0.00... for observed difference

# Critic Score and Global Sales

- Scatter plot of Global Sales and Critic Scores
- Majority of data points below 20 million units
- Log transformation of Global Sales
- Simple linear regression
- R-squared value of 17%
- Using Machine Learning to fit additional features
- Produced new R-squared of 30%

# Video Game Genres

Strategy

Puzzle

Adventure

Action

Role-Playing

Simulator

# Genre vs Global Sales

- Total global sales per Genre
- Action games have the highest total global sales
- About 400 million units higher than Shooters or Sports.
- 20% of all video games were action
- More action games = more total sales
- What is a better way to see genre and global sales?
- Look at average sales!

# Genre vs Average Global Sales

- Average global sales of each genre
- Action games have moved to 6th place
- Shooters have highest average sales at about 1.6 million units

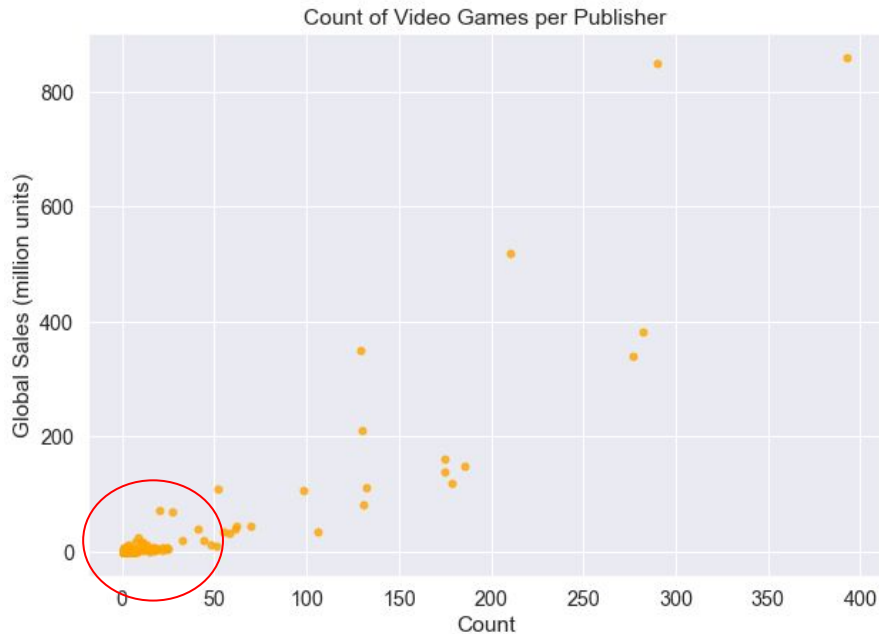

# Publishers

# Publisher Game Count vs Global Sales

- Count of games per publisher
- The more games you make the more money you make!
- Many data points at lower left
- Log transformation of count and global sales

# Publisher Game Count vs Global Sales

- Log transformation of count and global sales
- Fitting a linear regression line
- R-squared of 68%

# Machine Learning

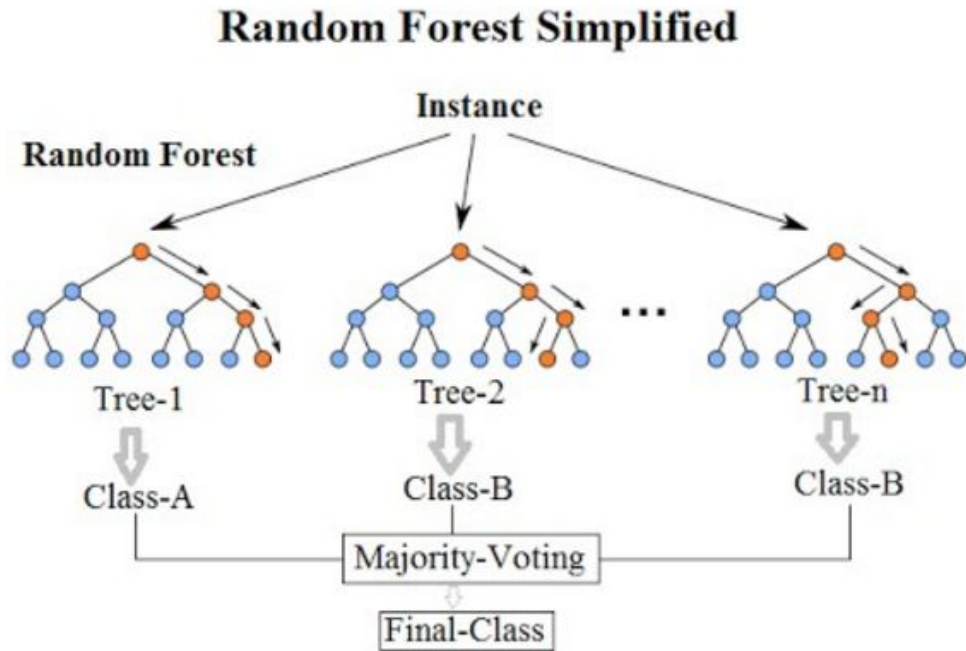

<https://towardsdatascience.com/machine-learning-for-beginners-d247a9420dab>

# Classification

- Supervised learning for predictions
- Need labeled data
- Range of global sales values is 0.01-82 million units
- High selling = greater than 1 million units
- Video games label as either high selling or not

# Random Forest Classifier

- Ensemble learning method
- Majority vote of many decision trees

# Steps Taken for Training and Testing

- Split the labeled dataset into features variable and a target variable (the label)
- Encoded categorical features and the target variable
- Split the dataset into training set and a hold-out set
- Tuned the hyperparameters of the random forest using sklearn GridSearchCV with the training set
- Tested random forest model by fitting on training set and testing on hold-out set

# Random Forest Classifier Results

- Accuracy = 79%
- Precision = 73%
- AUC = 84%

# Key Takeaways

- Higher critic scores tend to have higher global sales
  - Critic score vs log global sales
  - R-squared of 17%
- Shooters had a higher average global sales
  - Shooter average global sales: ~ 1.6m units
  - Action average global sales: ~1.3m units
  - 20% of all video games were action
- Publishers that make more games make more money
  - Log of count vs log of global sales
  - R-squared of 68%
- Random Forest Classifier for Prediction
  - Accuracy of 79%
  - Precision of 73%
  - AUC of 84%

# Other Avenues to Explore and Areas to Improve

- Look into User Scores
- Better data cleaning and wrangling
- Neural Network

<https://www.geek.com/games/11-ways-video-games-can-make-you-a-better-person-1639865/>

A retro-style infinite tunnel with a checkered floor and walls. The floor and walls are composed of alternating red and cyan squares, creating a sense of depth and perspective. The ceiling is black with a series of white rectangular lights that recede into the distance. In the center of the tunnel, the words "YOU WIN!" are displayed in a large, pixelated, white font with a yellow outline. The overall aesthetic is reminiscent of classic 8-bit video games.

YOU WIN!
